SECTION A

SNOW REMOVAL OBJECTIVES AND PRIORITIES

SECTION A

SNOW REMOVAL OBJECTIVES AND PRIORITIES

STATEMENT OF OBJECTIVES

One of the primary objectives of the Department of Public Works is to provide for the safe and orderly movement of traffic in the city of Aurora during snow storms with priority given to public safety operations. This Snow and Ice Control Plan outlines the procedures used by the Public Works Department for snow removal operations.

SNOW REMOVAL PRIORITIES

All streets in Aurora are prioritized into groups for conducting snow removal operations, and snow plowing routes are also color coded for easy identification. The following summarizes the snow removal priorities.

Priority 1: Major Arterial Streets (Red)

The minimum roadway network that must be kept open to provide a transportation system that connects emergency centers throughout the city. Hospitals, fire stations, police stations and rescue squad units are all located on red priority routes.

Priority 2: Minor Arterial and Collector Streets (Blue)

The remaining higher traffic volume streets not included as a Priority 1 above. Schools, nursing homes, city recreation facilities and access to most neighborhoods are located on blue priority routes.

Priority 3: Secondary and Residential through Streets (Green)

Selected minor arterials, collectors, and bus routes deemed desirable routes to be maintained as weather permits. These routes will be serviced after the Priority 1 and 2 routes are completed.

Priority 4: Rural and Outlying Streets (Yellow)

These routes are roadways located in rural/annexed areas of the city. These routes will be serviced after all the preceding routes have been serviced and as time and available resources allow.

Non-Priority: Residential Streets

Non-priority residential streets do not receive regular winter maintenance. Snow removal service is provided on residential streets only during the most extreme weather conditions as approved by the Public Works Director. The city may develop procedures to allow private parties to conduct snow operations on residential streets. Such procedures are separate from this plan and, if developed, details will be available from the Streets Division at 303-326-8200 or streets@auroragov.org. This allowance does not replace or negate any services the city may provide for these streets during extreme weather conditions.

The basic roadway network consisting of priority one (red routes) and certain priority two streets (blue routes) will be maintained with the maximum service level at all times. Priority three (green routes) and priority four (yellow routes) will be maintained as winter

storm conditions allow. Procedures are established in this plan in the event winter conditions require road closures.

SECTION B

SNOW AND ICE CONTROL OPERATIONS

SECTION B

SNOW AND ICE CONTROL OPERATIONS

OPERATIONS POLICY

1. When a snow storm is predicted, snow removal personnel will be called to staff equipment. Equipment and labor will be assigned to all designated snow routes in the city. The weather forecast and the predicted intensity of the storm will dictate the required level of staffing for the snow storm. Equipment and personnel from all operating departments (Public Works, Aurora Water, Parks, Recreation and Open Space (PROS)) will be used to staff equipment. Equipment is based at either the North or South Satellite facility. Equipment and staff from all operating departments will report to either facility as directed. Staffing levels for snow events will be determined by the Streets Division of the Public Works Department.

Call back procedures have been established for the operating departments to determine how employees are called for emergency snow removal duties. Administrative Policy Memorandum 4-15 also governs snow removal responsibilities for operating department employees and is included in the Appendix for reference.

2. A variety of materials may be used for ice control such as liquid anti-icer and granular deicer. The Public Works Department supervisor on duty will determine the required materials and application rates to be used for anti-icing and/or deicing operations. All operating departments will use the required application rates.
3. When the weather conditions and forecast call for a heavy accumulation of snow warranting plowing operations, additional equipment and personnel from all operating departments may be called for plowing. Plowing will begin when the depth of snow warrants. The Street Maintenance Operations Center (SMOC) at the North Satellite Facility and the Emergency Operations Center (EOC) at the Municipal Justice Center may be staffed depending upon weather conditions. Plowing will continue until the storm abates and a reduced application of deicing materials will be used on the roads during plowing. When the storm is over, cleanup operations will be performed.

Lesser priority routes may be dropped from plowing, depending upon the storm conditions. The lowest priority routes (yellow) are dropped first, followed by green priority, and if necessary, blue priority routes.

COORDINATION WITH FIRE AND POLICE

The Public Works Director will notify the Office of Emergency Management in the event that a winter storm warrants the opening of the Emergency Operations Center (EOC). Conversely, the EOC may contact the Public Works Director in the event the storm may warrant additional support. The Police and Fire Department have interdepartmental public safety plans that address snow related emergencies. The Emergency Operations Plan from the Office of Emergency Management governs the city response to winter storms when the EOC is activated. A copy of the Major Winter Storm Incident Specific Plan is included in the Appendix for reference.

ORGANIZATIONAL STRUCTURE AND RESPONSIBILITIES

The snow and ice control organization used by the city of Aurora has been developed to establish a chain of command through which winter maintenance policies can be transformed into an effective and uniform set of actions. The actions taken by snow crews are the result of the general policies established by the administration and City Council, and procedures set forth in this plan, as approved by the Deputy City Manager of Public Works - Operations.

All snow and ice control activities are under the operational jurisdiction of the Director of Public Works who is responsible for the development and execution of the city's Snow and Ice Control Plan. If the EOC is open, operations will be monitored at the EOC at 14999 E. Alameda Parkway, the EOC may be activated virtually depending on the situation and operations are coordinated at the SMOC at 15740 East 32nd Avenue.

DEPARTMENT RESPONSIBILITIES

The following section outlines the duties and responsibilities of each department involved in snow removal.

1. Public Works Department

The Public Works Department has overall responsibility for development and execution of the Snow and Ice Control Plan. Several positions in the Department have key responsibilities for snow removal as described below:

Director of Public Works

- Requests the opening of the EOC;
- Recommends declaration of emergencies to City Manager;
- Establishes snow and ice control policies;
- Notifies the Deputy City Manager of the need to declare a snow emergency;

In the event that the storm becomes so severe that stalled cars and snow accumulations have hindered the snow removal process, the Director of Public Works or their designee shall recommend to the City Manager that a snow emergency be declared. Notification of the public will be as provided in the citywide Emergency Operations Plan.

Deputy Director of Public Works

- Reports Performance Measures to the Director of Public Works;
- Monitors weather conditions;
- Reviews snow and ice control performance;
- Insures that recovery planning and coordination is done;
- Initiates any road closures;
- Establishes snow routes to achieve desired levels;
- Establishes personnel and equipment requirements based on the recommendation of the Street Operations Manager;
- Implements policies and guidelines as set forth by the Director, including emergency directions;
- Keeps the EOC aware of storm conditions;

Street Operations Manager

- Responsible for the implementation and coordination of the snow and ice control policies;
- Updates the Snow and Ice Control Plan each year;
- Directs and monitors overall snow and ice control operations in conformation to the plan;
- Keeps the EOC aware of storm conditions;
- Requests the call out of additional personnel from other divisions;
- Requests the call out of private contractors;
- Ensures that equipment designated for snow and ice control operations is operable each year;
- Coordinates development and scheduling of operational training each year;
- Assures that current call out lists are available and that materials are available and stockpiled each year;
- Collects data for Performance Measures.

Street Superintendents & Supervisors

- Responsible for carrying out the snow and ice control operations within the assigned area;
- Direct snow clearance operations within various geographical areas;
- Provide a status report of manpower and equipment to the Street Operations Manager and Deputy Director of Public Works Operations;
- Provide periodic reports to the Street Operations Manager and Deputy Director of Public Works Operations regarding status of routes and road conditions;
- Assures that proper deicing material applications and/or plowing routes are being used;
- Implement Streets Division call out procedures as appropriate based on impending storm conditions;
- Notify the Street Operations Manager of additional personnel or equipment needs;
- Coordinate operations in the SMOC when appropriate;
- Coordinate management reporting data for appropriate reports.

Lead workers

- Assist the streets supervisor, as directed, to patrol areas and monitor field operations;
- Prepare reports, supervise operators/drivers;
- Perform other snow removal functions as may be delegated by the Streets Supervisors.

Equipment Operators and Drivers

- Perform vehicle and equipment inspections prior to beginning operations;
- Follow instructions of assigned supervisors concerning methods of treatment and assignments; within assigned area or assigned route(s) as defined by supervisor;

- Provide status reports to supervisor and inform supervisor of any breakdowns, delays or difficulties;
- Clean and inspect equipment after operations have been completed and report any equipment service/repair needs;
- Report in to supervisor as prescribed;
- Assist in mounting plows and hoppers, unplugging spreaders, etc.
- Place deicing chemicals as necessary in assigned area;
- Perform duties of operator when designated by Streets supervisors;
- Perform related duties as directed by the Streets supervisors

Fleet Maintenance

This division is responsible for properly staffing service and repair facilities to keep equipment operational during snow and ice control operations. The division will provide adequate staff to minimize equipment downtime.

2. Aurora Water & Parks, Recreation & Open Space Departments

When a weather forecast calls for a winter-type storm, regardless of its forecasted severity, these departments shall be alerted to the possibility of having to assist the Public Works Department for snow or ice removal operations. When conditions warrant, these divisions shall provide adequate staffing for all their available snow removal equipment and Streets Division equipment as necessary.

During September of each year, in preparation for the upcoming snow season, the Streets Division will contact these departments to determine the number of training sessions that will be required to familiarize department personnel with snow plowing operations. Additionally, contact persons will be established for coordinating labor and equipment utilization.

This snow plan does not provide for snow removal at city facilities including Fire Stations, Police Stations, Recreation Facilities and other city-owned buildings and parking lots. The PROS Department maintains a snow plan for the clearing of snow at city facilities.

3. Finance Management Department

Purchasing Services

The Purchasing Services Division will have previously issued purchase orders to contractors who have agreed to make their equipment available to the city. These contractors will be called in by the Street Operations Manager, if augmentation is required. Once the use of contractors with prearranged purchase orders has been exhausted, Contact the EOC to locate additional contractors who have equipment available for rental.

4. Police Department

The Police Department will be called upon for assistance in such street operations as traffic control, blocking off traffic where immediate hazards exist and reporting

dangerous conditions to the EOC. They will also enforce emergency traffic regulations and parking restrictions.

SNOW COMMAND CENTERS

Emergency Operations Center (EOC)

The EOC is located at the Municipal Justice Center. Telephone and radio communications will be available in that room which allows department heads contact with their various departments, as well as allowing those in the EOC to monitor the progress of the operation. Alternatively, a virtual EOC may be opened in MSTeams or other online app.

After the EOC has been closed, routine calls regarding the snow storm and street conditions will be referred to the Access Aurora, telephone number 303.739.7000.

City maps showing all of the snow routes will be maintained in the EOC and online. The Public Works Department representative located in the command center will maintain a storm progress report and also coordinate with and advise other city agencies of snow and ice control operations where applicable. Storm data shall be assembled and displayed indicating accumulated snowfall, temperature, forecast, etc.

Street Maintenance Operations Center (SMOC)

The SMOC shall be located on the second floor of the North Satellite Facility. This center shall be furnished with the proper office and communications equipment needed to perform the various functions detailed below. This center provides a staging area close to the main plowing operation for employees involved in emergency snow removal to receive information during the winter storm. Alternatively, a virtual SMOC may be opened in MSTeams or other online app.

The SMOC shall have three primary functions:

1. Keep the EOC advised of the status of the storm and road conditions. Maintain the computer and management information system during the storm.
2. Develop, maintain, and provide support information and data relevant to snow and ice removal operations.
3. Act as the communications and coordinating center for snow and ice removal operations. Monitor the equipment status, personnel, street conditions and all aspects of the field operations.

Staffing Requirements

The SMOC will be operated by a varying number of personnel reflecting the intensity and severity of the storm. A minimum operation may require the temporary or intermittent assistance of office personnel.

In any snow and ice control operation where the SMOC is staffed, it shall be under the administrative direction of the Street Operations Manager and a Superintendent with at least one clerical assistant. Supervisors from the PROS and Aurora Water departments

may staff the center to provide communication with their respective employees, as necessary.

Emergency operations and heavy snow accumulation operations may require additional assistance from other departments for response to questions and requests.

After the Storm

When the storm is over, the Streets Division shall prepare a written review of the snow and ice control operation that will contain:

- a. Amount of material used and cost;
- b. Number of lane miles treated;
- c. Number of lane miles plowed;
- d. Amount of regular time hours for Streets Division employees and cost;
- e. Amount of overtime hours for Streets Division employees and cost;
- f. Amount of all other time (regular, overtime) for all departments (each department listed separately) and cost;
- g. Complete breakdown of costs for contract equipment;
- h. Brief analysis and discussion of problems encountered and recommendations;
- i. Storm duration and description.

The post-storm review shall be submitted to the Director of Public Works for information and review.

SNOW AND ICE CONTROL OPERATIONS – DETAILED OPERATIONAL POLICIES

Winter Storm Categories

Winter storms that occur in our area may be categorized into four basic types. The response to the storm is different for each category. The following discussion presents information concerning these categories, the service levels to be maintained and the materials used for each type of storm. The following section will discuss the staffing and response levels in more detail.

Category I	
Predicted Snow Fall Amount:	Trace – 2”
Service Level:	Maintain primary (red) and secondary (blue) routes during storm. Lower priority routes require service at the end of the storm.
Materials:	Liquid anti-icer, solid deicer as needed
<i>Road treatment primarily consists of applying anti-icing chemical as necessary at the onset of the storm. Liquid deicers may be applied only to bridges and overpasses depending upon weather conditions. Solid deicing materials may also be used depending upon weather. Typically, these storms move out of Aurora within 24 hours and one application of the anti-icing chemical is sufficient to maintain the desired service level. (This storm category does not typically require multiple work shifts).</i>	

Category II

Predicted Snow Fall Amount: 2” to 6”

Service Level: Maintain primary (red) and secondary (blue) routes during storm. Lower priority routes require service at the end of the storm.

Materials: Liquid anti-icer, solid deicer as needed

Storms in this category require all available snow plows from operating departments including liquid chemical distributors. Heavy equipment is not required for storms at this level. Road treatment primarily consists of applying anti-icing chemical at the onset of the storm and deicing chemical as needed during the storm. Plowing may be required depending upon the weather conditions. If plowing is required, primary (red priority) snow routes are maintained throughout the storm. Lower priority routes are maintained as the storm abates or ends. Multiple work shifts are usually required for this type of storm. Additional supervision may also be necessary to manage the storm response.

Category III

Predicted Snow Fall Amount: 6” to 12”

Service Level: Maintain primary (red) and secondary (blue) routes during storm. Secondary (blue) priority routes may be delayed depending upon weather conditions and school closures. Lower priority routes require service at the end of the storm.

Materials: Liquid anti-icer, solid deicer as needed

Storms at this level require all available equipment including snowplows and heavy equipment. Typically, multiple work shifts over more than one day are needed to maintain the road system in passable condition. Road treatment may initially consist of applying anti-icing chemical at the onset of the storm, but typically progresses quickly to snow plowing with spot application of solid deicers.

During the storm, primary (red priority) snow routes are the only routes maintained. Secondary (blue priority) routes are treated and/or plowed as personnel and equipment are available after the first priority routes are completed. Lower priority routes are plowed after the snow has ceased and after the primary and secondary routes are completed.

Category IV

Predicted Snow Fall Amount: 12” or more

Service Level: Primary (red) routes remain passable during storm event. Secondary routes are plowed after the main arterial streets are fully opened and passable. Neighborhood streets may be plowed after the storm if determined by the Public Works Director.

Materials: Liquid deicers and solid deicers as the storm abates.

This category includes storms with sufficient snowfall to cause a major disruption in the transportation system. Major roadways including interstate highways may be closed. Businesses and schools may also be closed. During the storm, primary (red priority) routes will remain passable. All other routes will be plowed as personnel and equipment permit, typically after snowfall has ceased. Snow removal may be required on neighborhood streets depending upon the final storm accumulation. Storms in this category require all available city personnel and equipment and may include contracted snow removal personnel and equipment.

Equipment

Equipment is provided to each maintenance district from the Aurora Water Department and the PROS Department. The assignment of the equipment to each maintenance district is included in the equipment section of this plan. It is the responsibility of each department to maintain their equipment in good operating condition for snow removal. Not all of the trucks from the Aurora Water Department are available for snow removal duty because Water T&D holds trucks for water emergencies.

Employees are provided from all the operating departments (Public Works, Aurora Water and PROS) to staff equipment. The Streets Division does not have sufficient employees available to staff all of their equipment. Employees from other operating departments are essential for having all equipment fully operational during snow events.

Equipment Staffing Levels by Storm Category

Each storm category requires different levels of equipment and staffing. Storms lasting more than one shift require additional personnel to relieve the first responders to the storm. The following is a summary of the ideal equipment and staffing required for each storm category:

Category I Storm: Trace to 2” accumulation

Equipment Type	Quantity	Staffing/Shift
Plow Trucks	20	20
Liquid Distributors	17	17
Heavy Equipment	2	2
Supervision	4	4
Total	43	43

Category II Storm: 2” to 6” accumulation

Equipment Type	Quantity	Staffing/Shift	Staffing/24hours
Plow Trucks	36	36	72
Liquid Distributors	17	17	34
Heavy Equipment	2	2	4
Supervision	4	4	8
Total	59	59	118

Category III Storm: 6” to 12” accumulation

Equipment Type	Quantity	Staffing/Shift	Staffing/24hours
Plow Trucks	48	48	96
Liquid Distributors	17	17	34
Heavy Equipment	18	18	36
Supervision	7	7	14
Total	90	90	180

Category IV Storm: greater than 12” accumulation

Equipment Type	Quantity	Staffing/Shift	Staffing/24hours
Plow Trucks	48	48	96
Liquid Distributors	17	17	34
Heavy Equipment	18	18	36
Contractors **	10		
Supervision ***	10	10	20
Total	103	93	186

** Contract equipment varies with storm conditions. Normal range is from 10-30 pieces of heavy equipment.

*** Supervision includes Inspectors to monitor contractors.
Large storms may also include personnel to transport drivers to and from home.

Plowing and Treatment Operations

- The Superintendent for each region will be responsible for determining the number of personnel and types of equipment to dispatch during each snow storm. Each storm is variable, which shall be considered when assignments are determined.
- Anti-icing and/or deicing operations shall begin as soon as possible when conditions warrant. The supervisor on duty shall determine the application rate of the materials. Bridges and overpasses shall receive early attention, as well as known trouble spots for each snow route. Roadway approaches to major arterials, particularly those with large grade differentials, shall receive regular deicing attention.
- Snow plowing shall begin when the snow depth warrants. Snow routes shall be plowed and/or deiced in order of their priority as defined in this snow plan. Plowing shall be conducted at a maximum speed of 20 miles per hour. Streets generally will be plowed to the outside curb area.
- Street Supervisors on duty shall routinely report street conditions and problem areas to the Superintendent and the SMOC as necessary during the storm. Supervisors shall also notify the SMOC when equipment is out of service, when personnel are re-assigned or other information. The supervisor on duty shall inform the Superintendent at the beginning of each shift as to the personnel and equipment assignments for each snow route.
- The supervisor shall also monitor the condition of snow routes in outlying areas and the snow removal as appropriate. The Superintendent for each region shall review and approve any invoices for payment from any agency or contractor for snow removal services.
- The Superintendent for each region shall be responsible for maintaining all equipment in working order for each snow storm.
- Snow fences have been installed at various locations throughout the city. These fences shall be maintained at all times in proper condition.
- Superintendents shall approve all time cards for employees from all departments on duty for each shift.
- In severe Category IV storms, housing for employees may be provided at either a local hotel or in a maintenance facility. This will ensure relief drivers are available for the next work shift.

- In multiple-shift storms, food may be provided for employees working shifts. This will allow employees nourishment and to be able to continue working uninterrupted throughout their shift.
- Once snow fall has abated or ceased, supervisors and Street Operations Manager may develop a recovery plan, if forecast weather conditions warrant such operations (i.e. deep snow fall, extremely cold temperatures, high winds, prolonged periods of either of these conditions, etc). The recovery plan may include the use of contracted forces as needed.

Hauling and Dumping Operations

Dump sites are located throughout the city in both regions. Snow shall be hauled to each dump site as determined by the Superintendent for each region. Dumping shall be conducted to maximize space at each site. Dumping or hauling from private property without authorization is prohibited. Snow will be removed according to the relative priority of the street with red priority streets first, followed by blue, green and yellow priorities.

The following locations, listed here in order of use preference, have been designated as snow dump sites for upcoming snow season:

1. Signature Park – NE corner of Airport Blvd. & Alameda Pkwy. on Alameda Dr.
2. Griswold Water Treatment Plant – 14201 E. Hampden Ave.
3. Delmar Park Parking Lot – 12000 E. 6th Ave.
4. Sports Park – 18601 E. Sports Park Dr.
5. Exposition Park Parking Lot – 10955 E. Exposition Ave.
6. SE Satellite (aka Snow Hawk) – 27801 E Quincy Ave

Snow at intersections and island ends on major arterials will receive priority to provide for safe traffic flow. The Superintendent for each region shall determine the locations for orderly snow hauling.

Towing Procedures

Towing stalled or abandoned vehicles may be necessary so that the snow and ice control operations can be effective in keeping a priority snow route open for safe traffic flow.

When authorized by the Director of Public Works, towing of stalled or abandoned vehicles in consultation with the Police Department may be necessary to keep the street open to safe traffic flow. The EOC, upon request from a Streets Division Supervisor, will notify the Police Department, who will dispatch a commercial towing company to provide the required assistance. The Police Department will maintain a list of commercial towing companies who have contracts with the city to provide this service. If commercial tow trucks are not available, a Streets Supervisor may authorize the use of city equipment for towing purposes. Every effort will be made to avoid damage to the towed vehicle.

Road Closures

During certain winter maintenance operations, it may become necessary to close streets or portions of streets to traffic.

It shall be the responsibility of the Streets Division to obtain, maintain and place all barricades. Other operating department personnel may be used to help place barricades on roadways for closure. Variable message signs may also be used during winter conditions.

The Streets Division shall store barricades and signs, and maintain an inventory of all barricades and signs, city-owned and rented.

During Category III & IV storms, CDOT will often close I-70 at Airpark Road. The impacts of these closures are most severe in the area bordering I-70 from Chambers Road to Tower Road. The Flying J Truck Stop at Airport Boulevard and 32nd Avenue is a depot for trucks waiting out the storm. In the event of the closure of I-70, roads in the developed area around the truck stop will be cleared and trucks will be directed to park along these areas. This will help keep the main arterial roadways clear for emergency vehicles.

Extreme Conditions

Extreme conditions may include weather conditions such as deep snow accumulation, high winds, extremely low temperatures, extended periods of either conditions or other weather condition considered reasonably extreme. They may also include resource conditions and constraints, such as a lack of equipment or personnel. In either case, the Streets Operations Manager may recommend the use of contracted forces and equipment to assist in operations during an event or during the recovery period after the event. The determination to use contract forces should be made as soon as possible, which could include during the initial planning stage. If necessary, contract forces may be authorized to report to a city facility in advance of deployment to ensure such forces are available.

Enhanced Bike Lanes

The City of Aurora Publics Works – Streets Division has constructed 4 enhanced bike lanes that are serviced upon completion of each route within the Snow Plan or following the completion of the snow event. Each lane is divided from the roadway by a concrete barrier, necessitating the use of alternative equipment to complete snow removal. These lanes may be used to store snow plowed from the adjacent roadway and may be inaccessible during and following large snow events.

The 4 enhanced bike lanes are located as follows:

- North Route 1 – E. Montview Blvd
- South Route 1 – S. Potomac St., E. Jewell Ave
- South Route 2 – E. Florida Ave.
- South Route 3 – E. Mexico Ave

SECTION E

SNOW ROUTES

INTRODUCTION

SNOW REMOVAL ROUTES

This section includes maps and written description of all routes. Those routes north of and including Mississippi Avenue constitute the "North Region" and are serviced from the North Satellite Facility, approximately located at E. 32nd Avenue and Chambers Road. Those routes south of Mississippi Avenue constitute the "South Region" and are serviced from the South Satellite Facility, approximately located at S. Eagle Street and E. Hampden Avenue. Individual route descriptions and maps support the North and South Region maps, to provide a higher level of detail.

The following color codes are used to indicate priorities:

Red -- Priority 1, Major Arterials

Blue -- Priority 2, Primary Streets

Green -- Priority 3, Secondary and Residential thru Streets

Yellow -- Priority 4, Rural and Outlying Streets

None -- Non-priority Residential Streets

SECTION F

APPENDIX

ORDINANCES AND REGULATIONS

AN ORDINANCE RELATING TO SNOW EMERGENCIES

Sec. 134-181. Definitions

The following words, terms and phrases, when used in this article, shall have the meanings ascribed to them in this section, except where the context clearly indicates a different meaning:

Director of public works means the director of public works or designee.

Roadway means that portion of a street or highway improved, designed, or ordinarily used for vehicular travel, exclusive of the shoulder.

Secondary street means any street which is not marked "Snow Emergency Route."

Snow emergency means a condition deemed to exist by the City Manager or Designated Representative upon the recommendation of the Director of Public Works due to the effect or forecasted effect of climatic conditions upon the surface of roadways within the city.

Snow emergency routes means those streets marked as such in accordance with the provisions of this article.

Street or highway means the entire width between the boundary lines of every way publicly maintained and open to the use of the public, as a matter of right, for the purposes of vehicular travel. (Code 1979, § 37-50; Ord. No. 2016-34, § 9, 8-8-2016)

Sec. 134-182. Designated

The City Manager shall designate snow emergency routes within the city based upon recommendations made by the Director of Public Works. Snow emergency routes will be reviewed on at least an annual basis. (Code 1979, § 37-51)

Sec. 134-183. Parking

Whenever the Director of Public Works finds and so determines that weather conditions will make it necessary that motor vehicle traffic be expedited and that parking on snow emergency routes be prohibited for snow plowing and other purposes, the Director shall request the City Manager or his or her designated representative to put into effect a parking prohibition upon snow emergency routes. The Director making the determination shall do so either upon the basis of falling snow, sleet, or freezing rain, or upon the basis of a forecast by the United States Weather Bureau, or other weather service, that snow, sleet, or freezing rain is expected. Once in effect, a parking prohibition shall remain in effect until terminated by announcement by the City Manager. No person shall park or allow to remain parked any vehicle on any portion of a snow emergency route to which such prohibition applies. Nothing in this section shall be construed to permit parking in violation of any other provision of this Code relating to the regulation of parking, stopping or standing during normal weather conditions. (Code 1979, § 37-52)

Sec. 134-184. Stalled Vehicles

Whenever a vehicle becomes stalled for any reason on any part of a snow emergency route upon which there is a parking prohibition in effect, the person operating such vehicle shall take immediate action to have the vehicle towed or pushed off the roadway of such snow emergency route, either onto the first secondary street or onto the non-roadway portion of the public right-of-way. No person shall abandon or leave his or her vehicle in the roadway of a snow emergency route, except for the purpose of immediately securing assistance from a garage, gasoline station, telephone facility or other place of assistance. (Code 1979, § 37-53)

Sec. 134-185. Announcement of Emergency

Under this article, the City Manager or his or her designated representative shall provide an announcement declaring an emergency to major radio and television stations that have expressed a desire to cooperate with the city. There shall be included in such announcement the time the parking prohibition is to be put into effect and the specific snow emergency routes affected. Where feasible, such announcement shall be disseminated to those newspapers having a general circulation which includes the city. (Code 1979, § 37-54)

Sec. 134-186. Termination of Parking Prohibition

Whenever the City Manager or his or her Designated Representative finds that the road conditions which originally gave rise to a parking prohibition no longer exist, he or she may declare the prohibition terminated for any and all snow emergency routes originally affected. Information relating to the termination of a parking prohibition shall be disseminated by the same method as indicated in Section 134-185. (Code 1979, § 37-55)

Sec. 134-187. Signs Posted

On each street designated as a snow emergency route, the Director of Public Works shall post at reasonable intervals special traffic signs, indicating by the appropriate wording that the street has been designated a Snow Emergency Route. (Code 1979, § 37-56)

Sec. 134-188. Removal of Vehicles

Any police officer of the city, or a duly designated representative of the Director of Public Works, is authorized to order the immediate removal of any vehicle which is in violation of any of the provisions of this article to the nearest place of safety when the vehicle is parked or stalled upon any part of a snow emergency route for which a parking prohibition is in effect. If the driver of such vehicle is either unwilling or unavailable for the purposes of complying with such order, the police officer or representative of the Director shall cause such vehicle to be immediately removed from the emergency snow route. For purposes of this section, the term "nearest place of safety" shall mean any location other than the snow emergency route itself. (Code 1979, § 37-57)

Sec. 134-189. Citation of Vehicles Parked or Abandoned

Whenever any motor vehicle without a driver or whose driver is unwilling to immediately remove the vehicle is found parked or left upon a snow emergency route for which a parking prohibition is in effect, a summons and complaint shall be issued for such vehicle in accordance with the provisions of this Chapter relating to the ticketing of vehicles. The issuance of a summons and complaint shall take place before the vehicle is ordered to be removed. Upon conviction of any section of this article the court shall assess a non-suspendable cost of \$10.00 for the expenses incurred as a result of the removal of the vehicle. It shall be an affirmative defense to any violation of this division that the owner or operator of the illegally parked vehicle was at the time of the issuance of the citation attempting to secure assistance or such vehicle had a readily apparent defect indicating an inability to move such vehicle. (Code 1979, § 37-58)

DATE: **October 18, 1993**

SUBJECT: Responsibility to report for snow removal duty.

I. Purpose:

The City of Aurora has a responsibility to ensure the health, safety and welfare of the general public. To this end, the City will utilize all available resources to effect the removal of snow from City streets, alleyways, bike paths, parks, facilities and other areas of City responsibility in a timely manner. Please refer to the Snow Removal Plan for additional information on snow removal responsibilities.

II. Scope:

This administrative policy applies to all employees who work in the Aurora Water Department, the Public Works Department, the Support Services Department and the Parks and Recreation Department.

III. Policy:

In order to effect removal of snow in a timely manner, it is necessary to have a pool of employees available to adequately staff snow removal equipment. In past years, the City has been able to adequately staff all snow removal equipment by recruiting employees on a voluntary basis. Because of an increase in the number of pieces of equipment used to accomplish snow removal coupled with diminishing labor resources, staffing of snow removal equipment has become problematic.

The purpose of this memorandum is to inform employees reporting to the departments mentioned within the scope of this administrative policy that they will be expected to report for snow removal duty outside of normal working hours, and that this mandate is a condition of employment for these employees.

The Snow Removal Plan was developed and is updated annually by the Department of Public Works. The plan provides detailed information as to what the responsibilities of the City are during snow events and also the prioritization of city-wide snow removal efforts.

IV. Responsibilities:

All City employees under the scope of this administrative policy are expected to be available for snow removal duty outside of normal working hours.

When snowfall is imminent, employees should realize that they may be called to work for snow removal responsibilities, and that they need to be ready and able to report as required. During the winter months snow removal is a primary responsibility for this group of employees.

Employees are expected to be accessible to supervisory staff in the event of a snowstorm. This can be accomplished by the supervisor contacting the employee at home or by having the employee call his/her supervisor.

V. Procedures:

Reporting procedures for snow removal duty are included in the Snow Removal Plan and are updated on an annual basis.

VI. Exceptions:

Exceptions will be dealt with on a departmental basis through written procedures.

VII. Effective Date: Upon publication.

VIII. Approval:

John L. Pazour, City Manager
