Construction Site Washouts

A guide for the correct disposal of concrete, paint, joint compound and other liquid wastes.

**AURORA
WATER**

By-products and wastes from construction sites can be a source of pollution. Since these pollutants can be washed into storm sewers and drainage ways by stormwater, they present a threat to plant and marine life in our rivers, streams, and to our drinking water.

Allowing liquid or solid waste to get into a storm drain or creek is illegal and constitutes a violation of Federal, State and local statutes.

Sheet rock installers, painters, masons and other tradesman must contain their washouts at convenient locations adjacent to their work areas.

Contractors and developers are responsible for having a washout area for concrete delivery trucks.

The waste from a concrete washout has a high alkalinity, which can be a threat to our environment. Concrete waste that is washed into the ground can run off into the gutter.

Report spills and illegal dumping, call 303-739-7370.
